

Long-term Opioid Use Major Risk Post-Surgery

CHIROPRACTIC IS FIRST-LINE OPTION FOR DRUG-FREE, NON-INVASIVE PAIN MANAGEMENT.

STUDY SHOWS

6%

Patients who underwent elective surgery filled an opioid prescription 90-180 days post-procedure

COMPARED TO

0.4%

Patients in non-surgical group

Post-surgery opioid use is increasingly common & underrecognized complication. Patients may overestimate safety of prescribed medications.

CHIROPRACTIC CARE IS A SAFER OPTION
